

# *Universal Bit Project Public Announcement*

*"A model for modular blockchain design"*

August 8th, 2017

# Hello world!

## First, a big thank you!

We can't tell you enough, how much all the support from the Universal Bit Project Community means to our team. As this project grows and efforts towards automation are made, community participation will play a progressively larger role.

With that in mind, we would like to announce the intentions and goals of the Universal Bit Project in this letter:

UNIBIT Labs presents the Universal Bit Project, a model for an unbridled future where fluidity of ideas and currency engage a vibrant and connected world. This model is designed around features and concepts developed within the UNIBIT Platform, which provides modular blockchain development capabilities within the UNIBIT ecosystem for virtually limitless applications. Some of these applications are already in development by UNIBIT Labs with details slated to be released to the public soon. As dedicated as the UNIBIT team is, we cannot do it alone and recognize the importance of engaging the community and forming an extensive bounty program to help fine-tune the development process. We eagerly await the successes and challenges that building this infrastructure will entail, and we look forward to overcoming these challenges together in an open source and transparent manner, as that is the spirit in which we embarked on this journey when we started.

We feel compelled to keep the UNIBIT Community involved with progress and are eager to inform everyone on milestone accomplishments in the near future.

To get involved in the community, please join our slack channel at <http://UniversalBit.slack.com>.

Best Regards,

**The Universal Bit Project Administrative Team**
